1. Project Overview

MedCred India is a centralized healthcare assistance platform that combines healthcare card services, mediclaim support, financial assistance workflows, family healthcare coverage, and digital onboarding into one scalable ecosystem.

The platform is designed to simplify:

- Medical support access
- Claim processing
- Family healthcare management
- Digital card generation
- Agent-based onboarding
- User verification
- Loan eligibility management

The system will support:

- Android Application
- iOS Application
- Web Admin Panel
- Agent Application

The architecture should be scalable, secure, API-based, and cloud-ready.

2. System Objectives

The primary objectives of the platform are:

- Provide digital healthcare cards
 - Enable individual and family healthcare coverage
 - Simplify mediclaim workflows
 - Digitize user onboarding
 - Support Aadhaar verification
 - Create agent-assisted registrations
 - Prevent fraud and duplicate claims
 - Maintain centralized healthcare records
 - Automate claim validations and approvals
-

3. User Roles & Access

Role	Description
User	End customer using healthcare and financial services
Family Member	Members linked under family healthcare card
Agent	Creates and manages user registrations
Admin	Complete system controller
Hospital Partner	Healthcare service provider

4. User Application Modules

The user application is the primary interface for customers to access healthcare services, digital cards, claims, and financial support.

Major user modules include:

- Authentication
- Digital Card

- Family Card
 - Mediclaim
 - Loan Eligibility
 - Wallet
 - Transactions
 - Notifications
 - Hospital Access
 - Support
-

5. Authentication & Registration Module

This module manages secure onboarding and user identity creation.

5.1 User Registration

Users should be able to create accounts using:

- Mobile Number
- OTP Verification
- Aadhaar Verification

Registration Fields

- Full Name
 - Mobile Number
 - Email Address
 - Date of Birth
 - Gender
 - Address
 - Aadhaar Number
 - Profile Photo
-

5.2 Login

Users can login using:

- Mobile + OTP
 - Password Login
-

5.3 Forgot Password

Allows secure password reset using OTP verification.

5.4 Account Verification

The system should verify:

- Mobile Number
 - Aadhaar Details
 - Duplicate Accounts
-

6. Digital Health Card Management

This module manages digital healthcare cards issued to users.

6.1 Individual Card

An individual card is issued for one user only.

Features

- Unique Card ID
 - QR Based Verification
 - Digital Card Access
 - Downloadable Card
 - Claim Eligibility
 - Card Validity
-

6.2 Family Card

Family cards allow multiple family members under one healthcare plan.

Features

- Add Multiple Members
 - Member Relationship Mapping
 - Shared Healthcare Benefits
 - Member Verification
 - Family Claim Eligibility
-

6.3 Card Status

Card statuses include:

- Active
 - Pending Verification
 - Expired
 - Suspended
 - Blocked
-

6.4 Card Renewal

Users should be able to:

- Renew card
 - Upgrade plan
 - Update member details
-

7. Family Card Management

This module manages all family-linked healthcare records.

7.1 Add Family Members

Users can add:

- Spouse
 - Children
 - Parents
 - Other eligible members
-

7.2 Member Verification

Each family member should require:

- Aadhaar Verification
 - Identity Validation
 - Relationship Mapping
-

7.3 Family Claim Restrictions

Only registered family members should be eligible for:

- Mediclaim
 - Healthcare benefits
 - Medical support
-

8. Mediclaim Management Module

This module manages medical claim requests and approvals.

8.1 Claim Types

Hospital Claim

Maximum claim limit:

- ₹2,00,000

Required documents:

- Hospital Bills
 - Discharge Summary
 - Prescription
 - Medical Reports
-

Home Treatment Claim

Maximum claim limit:

- ₹80,000

Required documents:

- Medicine Bills
 - Consultation Documents
 - Treatment Proof
-

8.2 Claim Submission

Users should be able to:

- Upload claim documents
 - Track claim status
 - View claim history
-

8.3 Claim Workflow

Claim stages:

- Submitted
 - Under Review
 - Verification Pending
 - Approved
 - Rejected
 - Completed
-

8.4 Claim Validation Rules

System should validate:

- Claim limit
 - Duplicate claims
 - Card validity
 - User eligibility
-

9. Loan Eligibility & Loan System

This module controls loan eligibility and application restrictions.

9.1 Loan Eligibility Rule

Users can apply for loan only after:

- 30 days of card purchase
-

9.2 Loan Restriction

Only one loan should be approved per user.

System should block:

- Duplicate applications
 - Multiple active loans
-

9.3 Eligibility Tracking

The system should display:

- Eligible
 - Not Eligible
 - Waiting Period Remaining
-

10. Aadhaar Verification & KYC Module

This module handles user verification and identity validation.

10.1 Aadhaar Verification

The system should support:

- Aadhaar Number Validation
- OTP Authentication

- Identity Matching
-

10.2 KYC Verification

The system should verify:

- User identity
 - Duplicate profiles
 - Family member verification
-

10.3 Verification Status

Verification statuses:

- Pending
 - Verified
 - Rejected
-

11. Agent Application

The platform should support agent-assisted onboarding.

11.1 Agent Registration

Agents should be able to register using:

- Mobile Number
 - Aadhaar Verification
 - Business Details
-

11.2 Agent Dashboard

Agents should be able to:

- Register users
 - Upload documents
 - Track applications
 - View registered users
 - Track approvals
-

11.3 User Creation by Agent

Agents can:

- Create healthcare cards
 - Upload customer documents
 - Submit verification requests
-

11.4 Agent Performance Tracking

Admin should track:

- Total registrations
 - Active users
 - Conversion count
 - Incentives
-

12. Agent Incentive & Wallet System

This module manages commission and earnings for agents.

12.1 Incentive Management

Agents should receive:

- Registration incentive
- Card activation commission

Commission values should be dynamic from admin panel.

12.2 Agent Wallet

Wallet should display:

- Total Earnings
- Pending Earnings
- Paid Earnings
- Transaction History

12.3 Settlement Management

Admin should manage:

- Commission approvals
 - Payment settlements
 - Wallet credits
-

13. Notification System

This module handles alerts and communication.

Notification Types

- Registration Alerts
- Verification Alerts
- Claim Updates
- Loan Eligibility Alerts
- Card Expiry Alerts
- Family Member Updates

Notification Channels

- Push Notifications
 - SMS
 - Email
 - In-App Notifications
-

14. Wallet & Transaction Management

This module stores all financial records.

14.1 Wallet Dashboard

Displays:

- Wallet Balance
- Claim Credits
- Refunds
- Incentives

14.2 Transaction History

Tracks:

- Claims
 - Refunds
 - Wallet Usage
 - Incentives
-

15. Hospital Network Module

This module manages partner hospitals.

15.1 Hospital Listings

Users should view:

- Hospital Name
- Location
- Contact Details

- Supported Claims

15.2 Hospital Verification

Admin should verify hospitals before activation.

15.3 Claim Supported Hospitals

The system should identify:

- Claim-enabled hospitals
 - Network hospitals
 - Partner healthcare centers
-

16. Fraud Detection & Security System

This module prevents misuse and duplicate activities.

Security Checks

The system should detect:

- Duplicate claims
- Fake registrations
- Multiple loans
- Invalid documents
- Suspicious activity

Security Actions

Admin should be able to:

- Block users
 - Suspend accounts
 - Flag suspicious claims
-

17. Admin Panel Modules

The admin panel acts as the central management system.

17.1 Dashboard

Displays:

- Total Users
- Active Cards
- Claims Count
- Active Agents
- Revenue
- Pending Verifications

17.2 User Management

Admin can:

- View users
- Block users
- Verify users
- Manage cards

17.3 Family Card Management

Admin can:

- View family members
- Verify member records
- Suspend family cards

17.4 Claim Management

Admin can:

- Review claims
 - Approve claims
 - Reject claims
 - Validate documents
-

17.5 Loan Eligibility Monitoring

Admin can:

- Track loan eligibility
 - View waiting periods
 - Block duplicate applications
-

17.6 Agent Management

Admin can:

- Approve agents
 - Block agents
 - Track performance
 - Manage incentives
-

17.7 Hospital Management

Admin can:

- Add hospitals
 - Approve hospitals
 - Update hospital records
-

17.8 Notification Management

Admin can send:

- Broadcast notifications
 - Claim alerts
 - Renewal reminders
-

17.9 Reports & Analytics

Admin should access:

- User Reports
 - Claim Reports
 - Agent Reports
 - Financial Reports
 - Verification Reports
-

18. Reports & Analytics

The system should generate:

- Daily Reports
- Monthly Reports
- Claim Analytics
- Registration Analytics
- Agent Performance Reports
- Revenue Reports

Export formats:

- Excel
 - PDF
-

19. Technical Architecture

The platform should use:

- Microservice Architecture
- API-first Structure
- Cloud-ready Infrastructure

Recommended Stack

Layer	Technology
Frontend	React.js
Admin Panel	React.js
Backend	Node.js(mono)
Database	MongoDB
Cache	Redis

20. Third Party Integrations

Required Integrations

- Aadhaar Verification API
 - SMS Gateway
 - Email Service
 - Push Notification Service
 - Payment Gateway
 - Cloud Storage
-

21. Security & Compliance

The platform should support:

- JWT Authentication
 - Encrypted Passwords
 - Secure APIs
 - SSL Security
 - Access Logs
 - Data Protection Policies
-

22. Non Functional Requirements

Requirement	Description
Scalability	System should support large user growth
Availability	High uptime architecture
Security	Secure user data protection
Performance	Fast API response time
Reliability	Stable healthcare workflows
Maintainability	Modular development structure
Backup	Automated backup support
